Introduction

DANESHMAND-AI was launched with the aim of strategically aligning businesses in all layers of organizational processes with artificial intelligence and based on over 30 years of experience of its founders in the field of information and communication technology.

About us

We, the founders of DANESHMAND-AI , have been working in the information technology industry for more than 30 years to develop customized and large-scale software to solve the problems of organizations in various industries, including the oil and gas industry, petrochemical industry, steel industry, tile industry, and defense industry.

For four years, we have been conducting extensive research in the field of developing artificial intelligence applications in the upstream processes of the oil and gas, Health and Sport, Mining and Energy, Safety and Security industries.

Services

Our services are focused on three areas of consulting and implementation and training in the field of artificial intelligence

Concept In Business

AI Consulting

Providing strategic planning consulting services in the field of artificial intelligence technology development in organizations and digital transformation

AI Developing

Automation of organizational processes by applying artificial intelligence technology and organizational intelligence

AI Training

Specialized training for programmers in various fields of data engineering and machine learning and programming

Objectives

Without goal setting, no results can be achieved. If we do not set goals for success, we have planned for failure!

Objective 01

Successful implementation of proof of technology (proof of issue) examples in four portfolios

Objective 02

Providing financial resources amounting to two million dollars

Objective 03

Development of the technology export market to the Persian Gulf region

Marketing Strategy

We transform the use of artificial intelligence from an unnecessary and fantasy application to an operational and real application in such a way that our customers feel the wonderful effect of this technology in improving organizational processes and the productivity and vitality of the organization.

Our focus is on helping people in organizations enjoy what they do, and AI is a friend, not a competitor!

01

AI in Detection: Application of artificial intelligence in identification and detection

02

AI in Prediction: Application of artificial intelligence in prediction

03

AI in Prevention: Application of artificial intelligence in prevention

04

AI in Optimization: Application of artificial intelligence in optimization

Our Segmentation

Oil & Gas

We have a Software in Drilling Optimization by AI.Application of artificial intelligence in drilling operations of oil and gas wells

Mine & Energy

We are developing a software to discover mineral deposits. Application of artificial intelligence in mining

Sport & Health

We are developing a software to discover the sports talents of our country and We are developing a software to discover the medicines needed by each individual.

Security & Safety

We are developing a software to help the police of our country to create more security and peace in the society. Application of artificial intelligence in security
